E85 ANALYSIS · PARADOX BREAKDOWN

E85 offers a **12% pump-price saving** over petrol (₹90.5 vs ₹103.0/L), but ethanol's lower energy density imposes a **+4.1% running-cost penalty** per km — you burn more litres to travel the same distance, erasing most of the pump saving. The mathematical break-even is **₹98.4/L for E85**; at the current ₹90.5/L it stays marginally worthwhile, but only if your engine is tuned for flex-fuel. The Swift's stock petrol ECU is not optimised for E85, making the real-world penalty closer to **6–8%**.

FUEL TYPE COMPARISON · YOUR FUEL HIGHLIGHTED

● E85

₹5.94/km

- ✓ 12% cheaper at pump
- ✓ Lower CO₂ (12.5% vs petrol)
- ✗ +4% running cost penalty
- ✗ Few dispensing stations

● Petrol ★

₹5.71/km

- ✓ Widest station network
- ✓ Smooth city performance
- ✗ Higher CO₂ than CNG/EV
- ✗ Rising fuel prices

● Diesel

₹4.85/km

- ✓ Best highway mileage
- ✓ Lower cost/km vs petrol
- ✗ Higher maintenance cost
- ✗ BS6 restrictions in cities

 Best for: Flex-fuel vehicles

CO₂: 0.168 kg/km · Refuel: 4 min

 Best for: City + highway

CO₂: 0.192 kg/km · Refuel: 4 min

 Best for: Highway/long haul

CO₂: 0.178 kg/km · Refuel: 4 min

 CNG

₹3.65/km

 36% cheaper than petrol

 Low CO₂ emissions

 Boot space reduction

 Fewer highway CNG pumps

 Best for: High-mileage city

CO₂: 0.138 kg/km · Refuel: 8 min

 EV

₹1.40/km

 75% lower CO₂ vs petrol

 Lowest running cost

 High upfront cost

 Charging infra gaps

 Best for: Urban commuter

CO₂: 0.045 kg/km · Charge: 45 min
