— About Me

Building at the intersection of AI & human creativity

I'm **Uzma Parveen**, a student at Integral University Lucknow with a deep passion for AI, Data Science, and building things that matter. I believe technology should solve real problems — and I'm learning every day to make that happen.

From training ML models to classifying sentiments, building dashboards, and crafting web experiences, I love the full spectrum of the build cycle. My journey spans a PLC internship, value-added courses, and active participation in academic and technical events.

When I'm not coding, I'm exploring new research papers, contributing to open source, and leveling up my GenAI skills. Leadership and communication drive how I collaborate and

web experiences, I love the full spectrum of the build cycle. My journey spans a PLC internship, value-added courses, and active participation in academic and technical events.

When I'm not coding, I'm exploring new research papers, contributing to open source, and leveling up my GenAI skills. Leadership and communication drive how I collaborate — I thrive in teams that ship.

– Projects

Things I've built

Real projects solving real problems — from ML models to interactive dashboards.

Personal Portfolio Predictor

A fully responsive portfolio website showcasing projects, skills, and achievements with smooth animations and dynamic content

Personal Portfolio Predictor

A fully responsive portfolio website showcasing projects, skills, and achievements with smooth animations and dynamic content rendering. Demonstrates front-end craftsmanship and UI/UX thinking.

JavaScript

Responsive Design

Source Code [Web](#)

Sentiment Analysis System

Developed a machine learning model that classifies customer reviews as positive, negative, or neutral. Leveraged NLP pipelines — tokenization, TF-IDF, and classification algorithms — to achieve meaningful accuracy on real-world text data.

Python

NLP

Scikit-learn

NLTK

Student Performance Dashboard

An interactive analytical dashboard to visualize academic performance trends and generate insights for students and educators. Connects Python data pipelines with SQL-backed storage to surface meaningful patterns in academic data.

Python

SQL

Data Visualization

Pandas

— [Achievements](#)

– Achievements

Milestones & Certifications

Volunteering Certificate

Awarded for active participation in the Educational Day Quiz – recognized for community contribution and engagement.

Verbal Shutdown Certificate

Certified participant in verbal communication and debate events – demonstrating strong public speaking and articulation skills.

Value Added Course Certificates

Completed multiple value-added courses, expanding expertise in AI, data science, and technical domains beyond the core curriculum.

PLC Internship

Hands-on internship experience with Programmable Logic Controllers – bridging the gap between software and industrial automation systems.

Active Academic & Technical Participant

Consistent participant in academic seminars, technical fests, workshops, and college events at

— Contact

Let's connect

Open to internships, collaborations, and exciting projects. Let's build something great together.
