

AI Supply Chain **Control Tower**

You are the Head of Operations for a global logistics network. Alerts will stream in – port congestion, supplier delays, demand spikes, and more. Choose your actions wisely: every decision moves your KPIs. Survive 3 minutes and protect the business.

Start Shift

How to Play

How to Play

Objective

Manage 3 minutes of live supply chain operations. React to incoming alerts, choose the best action, and keep your KPIs as high as possible while minimizing cost.

KPIs

- **Service Level** — % of orders delivered on time
- **Customer Satisfaction** — how happy customers are
- **Inventory Health** — stock accuracy & availability
- **Transportation Efficiency** — fleet/logistics performance
- **Operating Cost** — lower is better
- **Revenue Protected** — dollars saved from disruption

Alerts

Each alert has a priority and a countdown. If it expires unresolved, it auto-resolves as "Ignored" with a negative impact. Higher priority alerts affect KPIs more severely.

Actions

Each action button has different consequences — some are cheap but risky, others costly but safe. Choose based on the situation. Some effects apply immediately, others hit a few seconds later.
