

Role-Based Prompting

TURN CLAUDE INTO ANY EXPERT

WHAT IT IS

You assign Claude a specific identity — a role, expertise level, and context — before asking your question. Claude then thinks, writes, and advises from that expert's perspective.

THE FORMULA

"Act as [Role + Seniority] at [Company/Context]. Help me [specific task]."

e.g. "Act as a senior growth marketer at a B2B SaaS startup. Help me write a cold outreach sequence for enterprise buyers."

5 INSTANT PERSONAS

Developer
Senior Engineer

Product Mgr
B2B SaaS

HR Manager
People Ops

Founder
Early-Stage

Marketer
Growth Lead | Demand Gen

ABTalks - Claude AI Mastery Challenge

HOW IT WORKS — 3 STEPS

1. Set the Role

Name the expert identity, seniority level, and industry context before anything else.

2. Add Context

Include company size, audience, goal, or constraints. The more specific, the better the answer.

3. Give the Task

Ask your actual question. Claude now responds through that expert's knowledge and priorities.

BEFORE VS. AFTER — REAL EXAMPLE

✗ WITHOUT ROLE

"How do I improve team communication?"

Use clear language, hold regular meetings, and encourage open feedback among your team.

GENERIC - SURFACE-LEVEL

✓ WITH ROLE PROMPT

"As a senior HR Manager at a remote-first startup with 5 time zones..."

Implement async-first rituals: daily Loom check-ins, a Notion decision log, and structured retros using Start/Stop/Continue. Protect a 2-hr overlap window across all zones.

EXPERT-LEVEL | ACTIONABLE

3 KEY BENEFITS

🔍 Expert Depth

Claude draws on domain-specific knowledge, terminology, and priorities — not generic advice.

🗨️ Right Tone

A Founder's answer sounds different from an HR Manager's — because their real goals differ.

⚡ Fewer Back-and-Forths

The role provides instant context. Claude skips basics and gets straight to what matters.

4 PRO TIPS

A Stack roles — "As both a UX designer and a conversion rate expert..." for multi-angle answers.

B Add audience — "Explain this to a non-technical CEO."

C Set constraints — "You have a \$5K budget and 2 weeks." Context shapes better solutions.

D Specify tone — "Respond like you're briefing a board" vs. "Explain like I'm 15."

One of the most effective ways to improve AI responses is by providing a role before asking your question.

Without a role, AI gives a general answer. With a role, AI responds from a specific perspective, making the output more useful and relevant.

What is Role-Based Prompting?

Role-Based Prompting means instructing the AI to respond as a particular professional or expert.

Examples:  Product Manager

Developer

HR Specialist

Entrepreneur

Digital Marketer

Simple Comparison

Basic Prompt:

| "How can I improve my product?"

Role-Based Prompt:

"You are a Product Manager with 10 years of experience. How would you improve my product and increase customer satisfaction?"

The second prompt provides direction, allowing the AI to deliver deeper insights and more practical suggestions.

Why It Makes a Difference

By assigning a role, AI adjusts:

The knowledge it prioritizes

The language it uses

The strategies it recommends

The way it evaluates problems

This results in responses that feel more specialized and goal-oriented.

🌟 Advantages of Role-Based Prompting

1 Context-Rich Responses AI understands the perspective you want.

2 Expert-Level Guidance
Recommendations become more strategic and detailed.

3 Improved Problem Solving Different roles approach the same issue differently.

4 Reduced Back-and-Forth You receive more complete answers in fewer prompts.

🎯 Today's Activity

Take one question and ask it from multiple perspectives:

As a Product Manager

As a Startup Founder

As a Marketer

Observe how each role focuses on different priorities and solutions.

Lesson Learned

The best AI responses don't come from asking better questions alone—they come from providing better context. Role-Based Prompting is a simple technique that can significantly improve the quality and relevance of AI-generated answers.

Key Learning:

Tell the AI who to be before telling it what to do.
